

New Algorithms for the Highest Earthquakes of the Day January 30 – March 31, 2016

Patrick Geryl (patrick.geryl2012 (add) gmail.com) March 31, 2015

Abstract: *We found new algorithms for the calculation of the highest earthquakes of the day. In a previous abstract we outlined 4 algorithms to calculate if 6.0 plus earthquake activity is possible. Herewith we introduce the HIGH of the planetary alignments like the HIGH of the Conjunction and the Sun and the HIGH of the Opposition across the Sun. The full calculations start from March 1, 2016. 2 other algorithms start from March 19. They are the activated Planetary Mercury and Planetary Venus alignments. You can see for yourself that an interesting pattern is discovered... And predicting earthquakes comes quite close...*

Strong Evidence for Earthquakes Induced by Heliocentric and Planetary Alignments

NASA Relevance

In 2008 NASA sent this headline into the world, “Magnetic Portals Connect to the Sun.” If we assume that the same principle can be applied for all the planets and also for five planetoids, then we find a surprising connection between planetary alignments and earthquakes. In short; Planetary alignments create certain magnetic inductions that are amplified by the magnetic field of the Sun and the Earth. With this principle we can calculate how and when earthquakes will be induced.

Highlights from the 2008 (October 30th) NASA article :

“During the time it takes you to read this article, something will happen high overhead that until recently many scientists didn't believe in. A magnetic portal will open, linking Earth to the sun 93 million miles away. Tons of high-energy particles may flow through the opening before it closes again, around the time you reach the end of the page. Researchers have long known that the Earth and sun must be connected. Earth's magnetosphere (the magnetic bubble that surrounds our planet) is filled with particles from the sun that arrive via the solar wind and penetrate the planet's magnetic defenses. They enter by following magnetic field lines that can be traced from terra firma all the way back to the sun's atmosphere.”

Heliocentric - Planetary Alignment Theory

- The Sun sends charged particles within the solar wind, this ‘loads’ the planets ‘up’. We include Pluto as a planet because the calculations show a huge effect from Pluto on the Sun and the Earth.
- The moon has no magnetic field, but has a big difference in polarity between the side that is looking to the Sun and the side looking away from the Sun.
- When planets align...they send a kind of radio signal, probably a GSM-like signal.
- This radio signal is taken up by the magnetic field of the Sun and then made stronger, just like a GSM signal is made stronger when it reaches your apparatus.
- The portals that connect the Earth with the Sun are overwhelming proof of this principle.
- But also the magnetic field of the Earth reacts to these signals: When a signal reaches the Earth, her magnetic field empowers the signal: nearly instant earthquake.

Definition Alignments With the Planets & Planetoids:

- Two planets (or a planet – planetoid combination) that Heliocentrically align on the same side of the Sun: Conjunction and the Sun.
- Two planets (or a planet – planetoid combination) that Heliocentrically align on the opposite sides of the Sun: Opposition across the Sun.
- Triple Line Up: Any two planets, planetoids, or combinations, which Line Up. Remark: There can be quite a bit of difference in one day within these Triple Line Ups, due to fast Mercury that moves around 4 degrees a day, and Venus around 1.6 degrees a day.
- The Triple Line Up can be anywhere across the solar system – e.g. does not have to “go through” the Earth or the Sun. But they have to be in a straight line – Lined Up.
- The to be used ‘difference in degrees’ has to be estimated by a large scale program. With these differences we have a reasonable good result:
 - Opposition across the Sun: 3.5 degrees to each side from the midpoint.
 - Conjunction and the Sun: 3.5 degrees to each side from the midpoint.
 - Triple Line Up: 3.5 degrees to each side from the midpoint.

Figure 1: Here you see a combination from a Conjunction and the Sun, 2 Oppositions across the Sun and a 3 planet resonance (Triple Line Up). On the right Earth and Mars are in a Heliocentric Conjunction . Venus (on the left) is in a Heliocentric Opposition with the Earth and Mars at the same time.

Why the Planetoids?

Example 1: Pallas

Pallas is in a near -1:1 mean-motion orbital resonance with Ceres. Pallas also has a near-18:7 resonance (6500-year period) and an approximate 5:2 resonance (83-year period) with Jupiter.

Courtesy: Wikipedia

Figure 2: Depiction of asteroid Pallas 18:7 near resonance with Jupiter in a rotating frame . Jupiter (pink loop at upper left) is held nearly stationary. The shift in Pallas' orbital alignment relative to Jupiter increases steadily over time; it never reverses course (i.e., there is no libration).

Example 2: Chiron

Chiron is a body in transition, due to phase locking with both Saturn and Uranus. Its orbital period is a close match to the 7:12 resonance with Saturn and the 5:3 resonance with Uranus. It is engaged in a slow, but chaotic exchange of angular momentum involving Saturn and Uranus over a 50.42 year cycle at present. Chiron spends some of this cycle inside the orbit of Saturn, much as Pluto-Charon do inside Neptune's orbit at perihelion. In addition, Chiron accomplishes two orbital crossings of Saturn's orbit in each complete orbit. At aphelion, it approaches very close to the orbit of Uranus. This 50.42 year period of Chiron is not an exact discrete relation to either planetary resonance, but it is close enough, and the orbit is eccentric enough to allow for radical change caused by either a too close approach to Uranus or Saturn (Chiron and Other Transitional Solar System Bodies By William J. Priest).

Geocentric and Heliocentric Alignments and the Highest Earthquakes of the Day

Alignments With the Moon – Earth - Axis:

- A planet that aligns with the Moon on the same side of the Earth: Conjunction.
- A planet that aligns with the Moon on the opposite side of the Earth: Opposition.
- Other important alignments with the Moon - Earth axis: Trines, Sextiles, Squares.
- The to be used 'difference in degrees' has to be estimated by a large scale program. With these differences we have a reasonable good result:
 - Opposition across the Moon – Earth axis: 3.5 degrees to each side from the midpoint.
 - Conjunction and the Moon – Earth axis: 3.5 degrees to each side from the midpoint.

Alignments Needed for Higher Activity

- **A planet or planetoid which has a Geocentric alignment with the Sun.**
The most influential alignments are:
 - Squares.
 - Trines.
 - Sextiles.
- **To induce 6.5 plus activity you also need a Heliocentric connection:**
The most influential alignments are:
 - Squares.
 - Trines.
 - Sextiles.
- **3 planets (or a planet(s) – planetoid(s) combination) active at the same time with the Moon – Earth axis, and a corresponding Triple with the same code.** Quake activity depends from the strength of the Triple Line Up. Triples with Venus or Mercury lead to higher quake activity.
This can be considered one of the strongest Triples possible:
 - Triple Line Up Mercury – Venus – Neptune
 This can be considered one of the weakest Triples possible:
 - Triple Line Up Juno – Ceres – Pallas

Quake happens at the end of the Sextile Mercury – Moon – Earth:

Start: 10:47 – High: 15:01 – End: 19:14

Remark: Unusual long after the high!

Astrolog does show Moon Sextile Mercury (geocentric) at 15:01:20 GMT, which fits your "High" assuming it's time zone 1W. The time span from Start to High is 6:14, and from High to End is 4:13 (difference of 1:59, total of 10:27).

I think the explanation is Mercury went direct recently, on Monday the 25th. That means Mercury was at 0 velocity then, and has been rapidly accelerating its movement rate since then. A slow Mercury will make aspects happen faster, while a fast Mercury will make aspects happen slower. That's because Mercury is now moving closer to the speed of the other planet (the Moon in this case) so their relative speed is closer, so it takes longer for the Moon to overtake Mercury and start or end the aspect. It's like comparing how long it takes a car to pass by a slow person walking, versus how long it takes a car to pass another car moving at almost the same speed.

**Mercury and Neptune were not used before because only Neptune had a minor Geocentric connection.

**Now Mercury has also a minor Geocentric connection:
Geocentric Quintile Mercury - Uranus START: 08:18**

Therefore the remained energy in Neptune and Mercury from the Triple Mercury – Earth – Neptune was activated by the Moon – Earth alignments. The quake was between the HIGH of both alignments:

Sextile Neptune – Moon – Earth HIGH: 11:54:16
Sextile Mercury – Moon – Earth HIGH: 15:55:28 START: 12:12

Time quake from HIGH Neptune – Moon – Earth = 13:23 – 11:54 = 1:27 hour

Time quake from HIGH Mercury – Moon – Earth = 15:55 – 13:23 = 2:32 hour

Remark:

**Only Chiron has a Geocentric Sun alignment. So the quake starts about 30 minutes after the start of the Septile Chiron – Moon - Earth
Saturn, Mars and Mercury have Heliocentric Earth connections.**
