<http://aaronreality.blogspot.com>

I want to thank all the people at the [General Science Journal](#) who have helped me describe these ideas.

07/17/2009

## Abstract:

This paper will describe the nature and structure of Dark Energy.

## The Aether:

Dark Energy is the Aether that fills the universe. Dark Energy is rigid, discrete and 3 dimensional. Bosons vibrate through the Dark Energy.

## The Dark Energy Ruleset:

The space created by Dark Energy is not defined by any previous space; Hilbert, Einstein, or others. Previously defined space requires a flat universe, a vacuum and single point mass.

[\(Crothers \(3\)\)](#)

A discrete single Dark Energy unit is called a Ruleset. A Ruleset domain is exactly the width of one bit of information of a boson.

- A Ruleset is the medium in which vibrations transverse.
- A Ruleset is a 3 dimensional structure.
- A Ruleset is not aware of which vibration it holds or if it is void of vibrations.
- A Ruleset domain is the width of a bit of information of a boson.

Ruleset - A Dark Energy Space  
A cube with 3 dimensional spaces
