

A Newsletter, 1st volume of Future Science

Cheng Tianren

ABSTRACT

This journal is not a popular journal for public, it is a professional research level journal for scientist. It focus on many topics in mainstream science, especially for future science. Since this journal is very complicated and professional, so we use the “problem-proposed problem-analysis problem-solving” mode to explain our research, to make readers easier to understand. If you truly want to improve your knowledge by reading this journal, it is better for you to study the problems mentioned in this journal carefully. To write down your unusual solutions for these problems after you have read them. Any good idea about the problems appeared in this journal can be mail to author cheng.

CONTENT

1. ISSUE 2012-2013

Chapter 0 18 interesting math problems (2012-2013)

Chapter 1 selected problems in the navier-stokes equation

Chapter 2 discuss the navier-stokes equation in fluids(1)

Chapter 3 discuss the navier-stokes equation in fluids(2)

Chapter 4 some properties on convex cone

Chapter 5 nonlinear solitary waves-the klein-gordon equations

Chapter 6 some problems on orthogonal cartesian spaces

Chapter 7 non-archimedean analysis-the application of symmetric method

Chapter 8 weak fixed point property and schauder conjecture

Chapter 9 interesting mathematics

Chapter 10 lecture notes on recursive algorithms(in chinese)

Appendix(literature, music)

essay trilogy(in chinese)

in the world(a music collection will appear on 2014)

2. Textbook of the Future Science Institute

The spirit of future science institute (1)

Professor Jeff's mathematical exercises (1)

Professor Jeff's algorithm notes (1)

some remarks on ACM contest problems

3. Issue 2013-2014

Part 1: geometry of theoretical physics

Chapter 0 Interesting problems in Geometry (2013-2014)
Chapter 01 The paradox in general relativity
Chapter 1 Application of the Ptolemy theorem (1)(2)(3)
Chapter 2 The Ptolemy theorem in conics (1)(2)(3)
Chapter 3 From Ptolemy theorem to Non-Euclidean geometry (1)(2)(3)

Part 2: convex geometry

Chapter 0 Interesting problems in Geometry (2013-2014)

Chapter 01 An outline sketch for convexity

Chapter 1 The analysis techniques for convexity:
convex bodies (1)(2)(3)

Chapter 2 The analysis techniques for convexity:
CAT-spaces (1)(2)(3)

Appendix(literature, music)

Music collection In the world (in chinese)

Essay collection It is time to talk something serious
(will appear on 2015)

4. Issue 2014-2015

Chapter 0 : Interesting problems in representation theory, manifold
and kdV equation (2014-2015)

Part 1: Representation theory

Chapter 1 : Brauer theory

Chapter 1.1 : On the algebraic structure of Brauer group

Chapter 1.2 : On the algebraic property of Brauer character

Chapter 2 : Finite field

Chapter 2.1 : On the algebraic structure of Frobenius kernel

Chapter 2.2 : On the algebraic property of Abelian variety

Chapter 3 : Quantum group

Chapter 3.1 : On the Grothendieck category

Chapter 3.2 : On the foundation of Quantum group

Part 2: Manifold (cosmology)

Chapter 1 : On the First Chern class

Chapter 2 : On the Calabi-Yau manifold

Chapter 3 : On the Mirror symmetry

Part 3: kdV equation (invariant measure)

Chapter 1 : On the invariant measure of kdV system (1)

Chapter 2 : On the invariant measure of kdV system (2)

Appendix (religion, literature)

Chapter 1 : The spirit of Future Science Institute (2)

Chapter 2 : Essay Collection: It's time to talk something seriously

Chapter 3 : Selected work of Future Science: application and solution for its open
problems (will appear on 2016)
