Abstract :

Suppose, let us agree to this universe is relative but, a question arises that this relativity is of which relative? No answer, Other, the state of relative cannot come in to being without absolute if this principle may be truth that is our right to find it.

Keyword :

Space-motion-time are relative, But time may be suspect. Let us deep consideration about the time

Introduction :

Personal time, universal time and eternal time. Primarily, let us consider about eternal time. Eternal time extended space occupied by the time ether in to the whole universe. Time is controller on the whole universe. All this universe having move due to the time. Each entity having move due to this time. This time having Omni present, no birth, no die also always exists into the universe, on the universe and all entities into this time and time is into the each entity. Also, how is it relative?

Demonstration :

Rather, All this universe emergence due to this time. Apparently this universe may look relative but really it is absolute. Really every entity having made by space, time and motion. They may not be separate from each other. In this three components time is pure absolute and space motion also absoluteness when they have connected to the time. Let us called to this time FATHER OF TIME.

Result :

Note, try to understand by knowledge this below fact.

Most important

You are looking me, I am looking you. Both are present here. We are looking to each other. This is a fact no imagine. You can never to look your face, can never look to your birth n die. Also you can say that I am present now. What is proof have you? No proof.

Finally, you compel to believe on your father and mother and on surrounding people. We have come to conclusion, actually, you are present, also, you cannot see your face, birth and die. Similarly, this father of time have present also invisible. Nobody can say, this father of time is not present. So that, let us say this father of time is a principle of absolute. This father of time is a basic foundation for emergence of this whole universe (space, time, motion also) other, there is a right to say to each entity I am absolute, no relative. All this universe becomes transition not demise. It will better to say that this universe is corollary (vice tenet) than relative. This corollary universe is based on the father of time.

Conclusion :

Knowledge is needed to understand all this fact. Father of time is eternal. Velocity of light is absolute and this universe is corollary.

Relativity is an imagination is a optical illusion and is as a babbling.

Note, *each entity may transition can never demise, is a continue present. In this situation please decided that this universe relative or absolute. Reconsideration is need between personals seconds, universal seconds and eternal seconds*
