COMMUNICATION

It was published on July 15, 2024, as Research, in The General Science Journal: *Quantum Impulse Theory Reveals the Reality of Physical Phenomena that Contradicts the Chimerical Theory of Relativity and the Pre-Established*, with the purpose of registering the omission of *Official Physics* to apply its own scientific method to maintain only the imposition of beliefs and dogmatism by its leaders. Authors in *The General Science Journal* have published articles: such as Antonio Leon's with an experiment proposition similar to the one presented in the article above; Frederick David Tombe's on the double polarity of particles explaining electric charge, also being reported by the quantum impulse aspect this double polarity of particles revealing the essence of what electric charge is; the importance of the ether, by the mechanics of an ether-fluid, presented by Jean de Climont; and other excellent propositions that bring the real advance of scientific knowledge. In the above-mentioned article, the null result of the Michelson-Morley experiment is explained, the basis by Einstein himself of the theory of relativity, thus invalidating this mathematical continuous field theory of reference frames. And presenting the reason for its incompatibility with quantum gravity, by the quantum impulse. However, the absolute distance from all this new knowledge by *Official Physics* remains, since it is implicit that its leaders refuse to prove the experiments pointed out in which their results nullify their chimeras and doctrines.
