

## 2019: Relativists continue to insist on saying opposite things

Roger J Anderton

[R.J.Anderton@btinternet.com](mailto:R.J.Anderton@btinternet.com)

As at 2019: things have not changed, Relativists  
continue to contradict one another.

Sabine Hossenfelder, Frankfurt Institute for advanced studies, Germany: “many of his [Einstein’s] best-known thought experiments were based on data from real experimentation, such as the classic Michelson-Morley experiment that first measured the constancy of the speed of light.” Scientific American special edition Spring 2019 p.81

So, the Michelson-Morley experiment revealed the constancy of lightspeed (?)  
Not according to—

John D Norton, University of Pittsburgh: “Even today, this point needs emphasis. The Michelson-Morley experiment is fully compatible with an emission theory of light that contradicts the light postulate.” <http://philsci-archive.pitt.edu/1743/2/Norton.pdf>

Relativists happily say whatever they like; doesn’t matter if it is consistent with what others say; just calling it “relativity” covers up a multitude of sins.
