

Introduction: In this theory I will tell few points about what is beyond the universe, why the stars burn and what energy makes this, what is the main source of power for all stars and why the life time of stars is very high.

All the bodies in the universe are in motion and revolve or at least moves because gravitational force is there but why this gravitational force came it is due to the masses or else something it is different? Yes it is definitely something different gravitational force exists not due to the masses but it is due to the shape of the universe that has created this universe. Now the point comes who has created this universe? Definitely God has not created the universe but it is the universe itself born. Now the point comes from where the materials came to this universe. The reason for this is the building block elements of the universe is iron and clouds of gases. From these building block elements everything is going on in the universe also nuclear reaction. The nuclear reaction is important because the universe is simple it has only clouds of gases and iron. Now the point comes which element is helping for nuclear reaction. It is the simple universe. Please remember the universe is simple but it has powerful power in it. Invisible force or power is flowing in the universe like electric current. This is enough for why the bodies in the universe are in motion. Now I will explain scientifically for why the bodies in the universe are in motion.

Explanation: This explanation may be correct. I will give the reason. To find the reason for why all the planets, Sun and everything revolve around another body, you have to study the shape of the universe because the universe is not in shape which we have assumed. It may be curved shape or it may be any shape which we can't believe. So according to me the shape of the universe is really responsible for the motion of all bodies. Universe means everything surrounding us. The universe is the one which produces a set of bombs. The bombs are nothing but stars. Read "New Gravity Theory of Physics and Miscellaneous" for reference. Beyond the universe vacuum is there. There is only one universe. The universe acts as catalyst for all stars to burn. Without the universe or its environment the burning of stars is highly impossible. In other words the stars die early not live for more time. Hence the universe acts as catalyst. The nuclear reaction taking place in the stars is not nuclear fusion reaction but it is nuclear fission reaction. The rust iron present in the core of all stars burns and gives light and not the gases produce any type of nuclear reaction because the gas is gas material means that it is not solid material and hence the decision is that rust iron produces nuclear fission reaction. Since iron is the heavy element all of you thought that iron does not produce nuclear fission reaction and also all of you know that iron is present in the core of the Sun and all stars but all of you don't know it is not simple iron but it is powerful rust iron. Rust iron easily produces nuclear fission reaction because

Carbon is present in it and this carbon acts as catalyst. So this is the main finding. Read “New Gravity Theory of Physics and Miscellaneous” for reference.

**Special Type of Explanation of Nuclear Reaction in Stars:** The nuclear reaction in stars is nuclear fission reaction. The nuclear reaction is taking place in the entire core of all stars and the heat is generating from the Centre and it is dissipating outward. The heat is not stopping because of nuclear reaction. Einstein’s mass energy relation is correct and this mass energy relation resembles to stars. But why the stars have lifetime more. It is due to the special type of nuclear reaction. The reason for the special type of nuclear reaction is suitable environmental matching conditions are there in the universe. The environment is helping for all stars to have a definite period of life time. Now I will explain what special type of nuclear reaction is. First you know rust iron is powerful and it is powerful but why the stars have more life time. It is the structure and chemistry of rust iron which is there at the Centre of all stars. You know rust iron has holes. These holes make rust iron to survive for long time. Definitely Einstein’s mass energy relation is correct and no doubt about in it.
