

THE CHURCH WAS RIGHT THAT GALILEO WAS WRONG.

Galileo, Copernicus, & the Roman Catholic Church Astronomers agreed that the Earth is located at the center of the Anisotropic Physical Universe. Copernicus did not re-locate the Earth among the stars of the constellations. American Astronomer Harlow Shapley did...twice. Shapley invented the phrase "The Copernican Principle" in an attempt to convince his skeptics when he re-located the Milky Way in order to discredit the theory of his bitter arch-rival, Edwin Hubble.

In 2007, American Physicist Joel Primark & American Author Nancy Ellen Abrams (husband & wife) wrote *The View from the Center of The Universe*. An indirect consequence of the research of Saul Perlmutter & associates (2000) of the accelerating expansion of the Physical Universe is that each galaxy becomes center of its own observable Physical Universe. Another indirect consequence is Expansion Gravity. In 2015, Einstein's Gravity began to be explained as a function of the accelerating expansion of Saul Perlmutter. However, James Carter published his version of Expansion Gravity in 1971. This is shameful plagiarism of James Carter's Gravity by the Brainless Minions of the Einsteinians.

Thomas Huxley advised, “Allow yourself to be as a humble child to be led by the hand. Follow the truth even if you are led to the edge of the Abyss. Or you will never learn.”

The improvement of Christian Huygens to the Mechanical Clock revealed two clues. First, it revealed that the Length-of-Day from High Noon to High Noon is the result of the complex summation of two synchronized rhythms which exist at the 2:1 ratio. Secondly, it revealed that Astronomical Midnight-to-Midnight never varied from 23 hours, 56 minutes, & 4.1 seconds. It revealed that Solar Time & Astronomical Time were two different clockworks. The Solar Year is composed of 365.25 units while the Astronomical Year is composed of 366 units.

The movement of the Solar Analemma & the Gnomon of the Sun Dial reflect the movement of the Sun as observed on the Earth. The movement of the Sun upon the horizons during the Solar Year reveals a mystery for which no one offers a solution. From the Solar Solstice position on the horizon, the Sun accelerates toward the Solar Equinox position on the horizon. From the Solar Equinox position, the Sun decelerates toward the other Solar Solstice position. The Solar Year is only 50%. The Sun returns in the same manner. Neither model of Astronomy “predicts” the mystery revealed by the Mechanical Clock or the mystery of the Sun on the horizon.

The Heliocentrists of Protestant Europe ignored what cannot be explained. The Jesuit Astronomers of the Roman Catholic Church allowed themselves to be led to the edge of the Abyss, & there they waited for illumination.

Then, a twin disaster arrived for the Heliocentrists of Protestant Europe although separated by the span of two generations. The Famous “failed” Michelson & Morley Experiment of 1887 happened. The assumed movement of the Earth was not detected by the Light Interferometer. Decades later in a different academic area, American Astronomer Harlow Shapley repositioned the Sun & its planets in 1915 & again in 1930. Strangely enough, the reaction to MMX-1887 by the Heliocentrists of Protestant Europe made Shapley’s proposed relocation irrelevant.

Observing from afar, the Jesuit Astronomers shook their heads sadly at the plight of the Heliocentrist Protestant Astronomers who seemed to look upon the celestial objects with blind eyes. The Heliocentrists elected new leaders from their group who called themselves The Einsteinians.

The Einsteinians modeled a Physical Universe that failed to predict the Sidereal Year. Instead of finding solutions to mysteries, the Einsteinians were regressing into Superstitious Cosmology.

The Jesuit Astronomers scheduled a press conference to make the announcement that a new model will be introduced on October 17th, 2025. Until then, two clues were given. The first clue was that the Copernican Model (pre-Harlow Shapley, pre-Einsteinian) of Heliocentricity was correct but incomplete.

The second clue was that the model of Nilakantha Somayaji of 1500 A.D. was correct but incomplete, also.

The nations pondered. The Einsteinians raised the Red Flag of War.

October 17th, 2025 arrived & the Jesuit Astronomers revealed the slightly revised model of Heraclides of Pontus (387 B.C.-310 B.C.) of ancient Athens, Greece. This model positioned itself in the center of the Anisotropic Physical Universe. The Physical Universe rotated annually to supply the Sidereal Year. The Physical Universe is Anisotropic to supply the Sidereal Year. The Earth is centralized to supply the Sidereal Year.

Rather than admit defeat, the Einsteinians played a familiar card: Church-State Separation. It had prevented Protestant Europe from accepting the Gregorian Calendar Reform of 1538 A.D. for two centuries. If the source is the Roman Catholic Church, then there is a hidden agenda of Mind Control & Domination, correct? What will follow? Intelligent Design?

Déjà vu, anyone?

Immediately following the installment of Aristotle & Ptolemy & the removal of the Egyptian System of Astronomy in the Roman Catholic universities by the Scholastic Aristotelianism of St. Thomas Aquinas, Bishop Nicole Oresme (1325-1382) wrote *Livre du ciel du mondein* which he compared models of the Rotating Geocentric Earth & the Non-Rotating Geocentric Earth but concluded that he was not in opposition with Scholastic Aristotelianism.

Mano Singham, Associate Professor of Physics at Case Western University in Cleveland, Ohio, wrote an article, *The Copernican Myths*, for PHYSICS TODAY, December 2007. This article becomes the main feature of an article in CSMONITOR.com. *Copernicus and TheChurch: What The History Books Don't Say* by Steph Solis on February 19th, 2013. Singham writes, "*De revolutionibus*" was read and at least taught at several Catholic universities." However, the article also notes that Copernicus gained ridicule from poets & Protestants who condemned it as Heresy. "...Catholics eventually joined the wave of Protestant opposition and banned the book in 1616." One of the Protestants was Martin Luther (1483-1546). Martin Luther is quoted as saying, "There is talk of a new astronomer (Nicolaus Copernicus) who wants to prove that the Earth moves and goes around instead of the sky, the Sun, the Moon, just as if somebody were moving in a carriage or ship might (assume) that he is sitting stationary and at rest..."(1539).

Although the Vatican banned the book in 1616, it was restored to the curriculum in 1620 after a revision was added to state that it was a hypothetical model only.

In 1540, Pope Paul III authorized the formation of the newest order, The Society of Jesus. The members were known as Jesuits. The founding members were Francis Xavier, Peter Faber, Ignatius Loyola, & four other priests.

The opportunity existed for the Jesuits to approach the Papal Office to restore the Egyptian System of Astronomy & to remove the Scholastic Aristotelianism from 1540 to 1600. Then, the Papal Office would have installed The Society of Jesus (Jesuits) as the curriculum director of Roman Catholic universities & parochial schools. The Jesuits would have detected the plagiarism of The Maragheh Observatory by Copernicus. Instead of banning the book by Copernicus, the Jesuits would take much enjoyment in exposing it as a faulty model of Astronomy. But, to label it as ‘Heresy’ ends the discussion. Also, the Jesuits debated the various Tychonian Models of Europe (these models originated from Nilakantha Somayaji of Indian in 1500 A.D. Somayaji employed the Rotating Earth of Aryabhata of 500 A.D.). The Jesuits noted that Nilakantha Somayaji merely employed pairs of Tusi-Couplets in order to provide a physical model of Ptolemy’s Epicycles.

All of the competing Astronomical Models of 1600 A.D. agreed that the Earth-Sun Planetary System is centrally located in the Anisotropic Physical Universe. More specifically, the Earth-Sun Planetary System is medially located on the AXIS OF ROTATION of the Anisotropic Physical Universe. American Astronomer Harlow Shapley (1885-1972) repositioned the Earth-Sun Planetary System twice (1915 & 1930 approx. dating); it was NOT Nicolaus Copernicus. It was NOT Galileo. It was NOT Johann Kepler. It was NOT Sir Isaac Newton. It was NOT Pierre-Simon LaPlace.

This article is the fifth article of a series of five similar articles on gsjournal.net. The interested reader might enjoy the earlier articles: *The Message of Dr. Russell Arndts* (11-23-2020), *Analysis of the Tychonian Model of Astronomy* (03-14-2021), *Who Needs Nicolaus Copernicus?* (03-14-2021), & *Introducing The Neo-Heraclidean Model* (04-16-2021).

In certain fundamental Islamic nations, a person who is wrongly accused of blasphemy might be immediately killed by the crowd of bystanders. And what is the crime of “BLASPHEMY”? BLASPHEMY is to state your personal opinion that is contrary to the religion of Islam. To disagree is BLASPHEMY.

In politically correct America, Canada, England, Ireland, & Western Europe; to disagree is HATESPEECH...unless Religious Islamic speakers & authors are railing against Big Satan (America) & Little Satan (Western Europe including the United Kingdom). To disagree with such Islamic voices might be construed as BLASPHEMY.

HATESPEECH is protected speech in these rare exceptions. Obviously, to disagree with protected Religious Islamic voices is HATESPEECH and BLASPHEMY.

General Science Journal is designed to be a safe harbor for people who disagree with the majority consensus &/or a militant, violent minority consensus. Human beings react viscerally in matters of Religion & in matters of Science because these are components of the “Worldview”. When Religion & Science disagree, what then? Conflicting Worldviews. When Religion & Science agree, what then? Concordant Worldviews. When Religion & Science agree on a falsehood, what then? When Religion & Science agree on a superstitious pseudoscience, what then? If the Concordant Worldview is false, what then?

Protestant Europe is quick to point out the fate of Bruno in 1600 A.D. Bruno was burned alive at the stake for the crime of Heresy at the Vatican in Rome, Italy. Almost no one is aware that Miquel Servet suffered the same fate in Geneva, Switzerland in 1553 A.D. at the hands of the Calvinist Reformers. And what is the crime of “HERESY”? In this case, HERESY is to disagree with John Calvin. (As with Martin Luther, Calvin rejected Heliocentrism).

Hatespeech, Blasphemy, & Heresy is to simply report on the forensic results of the preserved hair clippings of Tycho Brahe. Brahe died of an ingested poison: Mercury. Johann Kepler was suspected then. The forensic results heightened their concerns. But, Scientific Authority with immense political capital reacted viscerally & sought to neutralize that perceived threat to the prevailing Worldview. Conspiracy? Yes & No. Such nuances simply do not apply to visceral reactions.

In the safe harbor of General Science Journal (after being initially harassed by Philip Gibbs at viXra.org), I state my personal opinions. I anticipate visceral reactions. It is better to be hated & to be labeled a pseudoscientist; it is better to be reviled & ridiculed than to be ignored. Philip Gibbs was my sole readership at viXra.org, it seems. 500 submissions a month, yet I get his individual attention?

Now, General Science Journal will have the dubious distinction of harboring a dangerous crank & crackpot. Someone who threatens to unravel the fabric of modern society. Someone who corrupts the morals of our youth. Someone who encourages the youth to question their Elders.

Dissident Science is too important to be the hobby of those people at Galileo’s age in 1632 A.D. The message must reach the children as they set aside their dolls & toy guns. If this article has not been rendered as GIBBERISH by your MENTAL DEFENSE MECHANISMS, then share it with a 15 year-old person.
