Abstract: Albert Einstein postulated a new science based on the **assumption** of the universal constancy of light-speed, wherein **no variation** of photon light speed can be rationalized from any form-variations of **his special selected theoretic** observations! He called this new science: Special Relativity Theory.

Relativity theory is based on the **relative** position and **relative-theoretic** observation of mass-objects motions **illuminated** by **ambient** light leading to the **correct** conclusion that lightspeed must be constant in all **those special selected frames** of limited observation; however, this thought experiment is **ignoring** the very **first original light source** Eigen-emittance from a self-contained **moving** inertial platforms; additional, Einstein disregarded therein that the first original origin of the photon energy is coming from electrons motions from within an electric circuit having each an inertial mass!

This theory conflicts with more than 100 serious logical paradoxes, it conflicts with the measurement of Fizeous chopped photon light-beam leading-edge speed-measurement contained on top the real-actual Earth-platform in motion, the light chromatic-doppler energy effects and the mass-kinetic energy of the **electron-motions** from **within** the atom-structure **causing** firstly the photon **life-giving energy** radiation! Important to note here that fast moving mirrors reflecting **ambient** light, like sun-light reflected from a fast spinning mirror, **are not inducing-accelerating** an **additonal** change in light speed of the leading edge photon, or an additional-change in light-photon **radiation energy** within an **inertial frame itself**; this has been well proven with many experiments! However, a **stationary-inertial-reference frame**, invariable directly in **sync-linked** with the **Sun** inertial reference frame bearing an **observer** observing Fizeous speed of light experiment on top the speeding-orbiting Earth platform will observe a total speed of light photons leading edge motions:

C + Earth orbital speed;

This means Fizeous light speed measurement needed a greater speed of light than **C, actually C + orbital speed of the Earth to measure the departing-emittance of photons at lightspeed from the light source on top the Earth!** Accordingly, to rationalise-proof Einstein's most central-core science aspect: The independence-constancy of light speed **C** in **all aspect** of observations and all correlations needs **thorough-real** physical experimental investigation beyond purely theoretical musings of the "Relativity department"; because they are selectively shunning experiments by reiterating Einstein's old **purely** theoretic statements wherein **first-original electron-mass-electrical-circuits** photon **expulsions-radiation** and the **impotent** photon-atom-surface **reflection** are inter mingled together without rhyme, reason or separation.

Additionally, the use of inferometers are not included here because of the additional unnecessary complexities-assumptions involved.

To proof-disproof Einstein's entire-complete theory: A **fast** spinning centrifuge platform, receives an original-self contained **laser** light beam power-electron circuit supply and **laser-light-source together mounted** onto the peripheral of this platform spinning at over 10000 RPM inscribing a tangential and outward pointing lightbeam; this fast spinning energy-electron circuit and laser light-source is chopped by a standing fixed slot appearing-shining through this stationary slot having a sharp knife edge for cutting the sweeping laser beam into precise sections. Here we have to remind us, that the use of a knife edge is the technology to form the printing character raster image bitmap using also laser sweep-motion over a knife edge! The generated knife edge chopped laser beam is pointed into an oblique opposing-standing mirror box causing a long internal reflected winding light beam cylinder having a stacked-reflected-undulating light beam total length of **over 1000 meters**. An additional-original energy and laser light beam source is mounted onto a **fixed** position of the centrifuge body, is also chopped into synchrony with the first light beam through the same slot knife edge, also entering the opposing mirror box in oblique angle creating a parallel light beam to the **first centrifuge-speed** light beam cylinder. These two side by side light beams having **each** a differential-**separate**-real electron mass-motion-photon source; now we can measure-quantize the **end** position differential or simultaineous **arrival** time

after the over 1000 meter run through the light-beam cylinder and evaluate, within the laboratory, the chromatic properties, the leading **edges** arrival **timing** differentials of the two **exit light beam pulses** from the light cylinders entering two side by side electrical solar cell sensors, comparing the differential or simultaneous arrival **timing** with an electronic Scope in the **nanosecond** realm-trace identifying-proving the reality of Einstein's simultaneity light theory! We are also able to investigate the angular speed aspect performance over a range of centrifuge angular speeds. This light beam cylinder construct is also used by the author's light **clock box** design, wherein a solar-cell end-array-panel is used for captioning clock time variation-drift and initiating "leap-time" corrections-algorithm; please view this on the General science net website under author Gottfried Gutsche! We should remind us here that Einstein himself received the Nobel Price for his work on the internal mechanics of the **solar cell** involving-inducing internal motions-flow of **electron particles** within the solarcell-circuit, each electron-particle having a mechanical internal miniscule inertial mass, having each real kinetic energy and momentum! The electron-mass change in kinetic energy translates-causes the absorption-expulsion of the **photon energy** quantity maintaining the total conservation of energy of the light emitting / solarcell circuit! Accordingly, time-momentum is **irrational here** because travel time of the electron **mass** body is:

$$\text{Time} = (\text{m}_{\text{mass-electron}} \text{Distance}_{\text{displacement}} \text{2/Force}_{\text{magnetic}})^{1/2}; \text{ or}$$

$$\text{Time}^2 = \text{m}_{\text{mass-electron}} \text{Distance}_{\text{displacement}} \text{2/Force}_{\text{magnetic}}$$

Wherein acceleration is:

$$\mathbf{a}_{\text{acceleration}} = \mathbf{Force/mass}$$

This was Einstein's discovery ending the one sided-old time-based momentum view of the solarcell mechanics! This is also showing that the electric current flow in the light source circuit is directly-proportionally related to the light-source photon-energy emittance flow, **both** being an interrelated **energy flow** principle in the lightspeed realm; accordingly, the light emitting **diode/solar cell** are efficient energy transducers converting electrical energy into light energy and vice-versa based on electron flow!
