Changing Terms of Mathematical Formulas For Calculating the Moves Without the Concepts of Speed (v) and Time (t)

Some physicists believe time is only space and nothing more. But they can not say that because they teach physics oficcial in which time is the Lord in the calculations of motion.
The big problem is to say: "Time does not exist" and show that in mathematics.

Yet it is not difficultIt to show if they think like me. So I think.
Imagine: I am a man of the Stone Age. I see sunrise and sunset. Long before the Babylonians and modern watchmakers I manufacture a machine to count numbers or units of the rotation of the Earth from a sunrise to next sunrise. The units, but copies of the Earth's rotation are placed by me in a circle. From a sunrise to the next sunrise I divide the circle into 24 units and say the names of the units are "hours". Each hour I divided into 60 fractions and say their names are "minute." I divided each minute into 60 fractions and say their names are "seconds". Well it's too good for me because I'm from the Stone Age. Now think like me.

Units hours, minutes and seconds of that my Watch Stone machine (my clock) are just units OF SPACE, units ROTATION of Hearth. My machine only copies, reproduces, imitates the motion of the Earth in space anything else. So why did the mathematics and physics after me gave a pseudonym (time), a nickname (time), a fake name (time) for the SPACE recorded by my watch? Why teach mathematics and physics are two things, two words? We know: there is only space anything else.

I know the answers. Time does not exist, is not real, is fictional, it is abstract. But mathematics needs time (as a mathematical term only) to calculate movement.

So let's eliminate the term "time" of mathematics and will be mathematically eliminated the big problem to correct the misconception (wrong) of space-time.

How to change the terms of mathematical formulas for calculating the moves without the concepts of speed and time? It's easy for me to do that. Look.

The traditional formula is d = v. t (distance is equal speed multiply (.) time)
To find the distance I multiply velocity (**.**) time. But I must to eliminate the <u>concept of speed and time</u> in the formulas of new concept. What can I do?
To eliminate the concept of time in Formula I <u>multiply</u> the **C**ompared **M**ovement of anything (**.**) the movement of the Earth. So the official formula : d = v . t … I change to   D = CM. HM
What is CM Compared Motion? It is the movement of anything in the universe. It can be motion of a car, motion of a turtle or motion of light. All things have a movement, all can be compared to Earth's motion. While the movement of Earth's motion is 30km/s the motion of light is 300,000 km/s. **In this new concept** the "CM**s** of light" is 300.000km**s** and **NO** 300.000 km **PER** second. If a say car I change to: "CM**h** of a car" is 80km**h** and **NO** 80 km **PER** hour. The word **PER** there is not <u>in the formulas of new concept **whithout** time.</u> The other formulas v = d/t… t=d/v… change to CM=D/HM… HM=D/CM

What is HM movement of the Earth? Is the Earth's rotation (motion) in SPACE recorded, copied, imitated, reproduced by the clocks shown in the units hours, minutes and seconds.
REMEMBER: In this new concept we need to understand: the units hours, minutes and seconds recorded by the clock are just units of SPACE, no units of TIME. That is all.
